CORPORATE PROFILE

[Greetings]

TOP MESSAGE

MAEDAKOSEN

Create a new market for the world by the power of innovation driven by new integration.

MAEDA KOSEN CO., LTD., the MAEDA KOSEN group core company, started as a rayon processing manufacture in 1918 as its precedent form.

Ever since MAEDA KOSEN was established in 1972, it has always been growing based on the technology called "Geosynthetics," continuously absorbing new business domain and firms from various technology fields like fiber, resin, metal, woods and civil engineering.

MAEDA KOSEN group will continue to generate new innovation in the field of infrastructure through new combinations and integration. We will create new markets for the world.

Chairman & CEO MAEDA KOSEN CO., LTD. Yukitoshi Maeda

MAEDA KOSEN group is an assembly of various venture companies that continue to take on new challenges.

MAEDA KOSEN group realized continuous growth utilizing mergers and acquisitions positively.

The scope of group's business is not limited to the civil engineering construction materials field only, but it covers wide range of industries including automobiles, agriculture, fisheries and medical.

Looking ahead, we will continue to mix "local" and "distinctive manufacturing" companies, and each group company will continuously take on a challenge of entering new fields and contribute to the local society.

President & COO MAEDA KOSEN CO., LTD. Takahiro Maeda

[Group Philosophy]

Basic Philosophy Good connection between the person and the person is the base of all, and the goal of nature.

Management Philosophy We contribute to a sustainable Earth and the creation of secure, bountiful society through our unique wisdom and technology.

Behavioral Philosophy 1 . People and corporation should live "straight."

"Five MDK virtues" and "Benevolence"
"Inseparability of knowledge and practice"

Justice

2 . We should challenge for Infinite possibility without being afraid of making mistakes.

Courage

3 . We should always stay at the site, discern the essence, challenge and improve with commitment.

Faith

4 . Create a new product that never seen before through the method never been tried before.

Wisdom

5 . People and corporation should never stop learning.

HISTORY

MAEDA KOSEN group stretches to various industry fields beyond the times

MAEDA KOSEN group encompasses a wide range of businesses from the development of national land infrastructure and industrial infrastructure to agricultural products, automotive wheels and medical products.

These diverse combinations transcend synergies that link businesses and companies, creating innovation through new combinations and creating new markets.

MAEDA KOSEN CAPITAL LLC established

MAEDA KOSEN CAPITAL LLC

For the development and maintenance of social infrastructure

Create and protect national land by geosynthetic technology.

Reliable achievements for our stakeholders

Effective use of **limited** and valuable fishery resources.

For the future of agriculture

Innovating Japanese agriculture.

High-precision technology

Sewing (tarpaulin, canvas) high-frequency welder processing with work of uncompromising expert technicians.

For the potentiality that textile connects

Achieve integrated production and
processing in-house and
inside the group.
Bring imagination to realization.

MAEDA KOSEN is a company that
creates "Mixing."
The company that mixes people and technologies.
Mixing causes a chemical reaction.

Innovation is the fruit of the chemical reaction.
Group aims to become the world's top innovator.
We will seek to create the ideal forms of
society and the forms of humanity.

To the creation of "Playfulness"

Go further,
to the landscape we haven't seen yet.

MAEDA KOSEN

Social infrastructure business
(Construction Materials)

Geosynthetic technology
that combines "civil
engineering" and "fiber"

MAEDA KOSEN has developed a variety of materials and engineering methods for transportation infrastructure reinforcement for roads and bridges, repairing and reinforcement of aged concrete structures. We have responded to the diverse needs of geotextiles with our proprietary technology cultivated for many years. In the future, we will continue creating pioneer geo-synthetic technologies (Geo=Landscape + Synthetics =Fibers Technology) blending civil engineering technologies with fiber technologies. We will continue to be a company that creates high-value-added products.

Contribute for the creation of disaster-resistant national land

Business description

Reinforcement construction method

In Japan, where land is limited, effective use of land and prevention of disasters through embankment reinforcement have become one of the major themes of civil engineering. MAEDA KOSEN's geotextile products and methods for reinforcing and stabilizing soft ground contributes support toward infrastructure stability, such as roads, railroads, residential land, and industrial sites.

Slope disaster prevention

Japan's land is located in an environment that is prone to have natural disasters such as earthquakes, typhoons, heavy rains, and heavy snowfall. Such natural disasters have a serious impact on the economy. We support disaster prevention and recovery works with new disaster prevention methods and products that use soil and geotextiles to protect against natural disasters.

Drainage, soil-suction-prevention, and water shielding

There is a risk that seepage and flow water may be one of the causes of landslide disasters and collapse accidents in embankment and riverbank works. We provide a variety of drainage materials, water-shielding materials, and soil-suction-prevention materials and scouring prevention materials that are apply to specific applications and purposes like "effluent" water effectively, "water stop" in order not to spread dirty water to the underground, and "prevent the leakage" of crushed stones and soil.

River and ocean

Instead of conventional concrete-covered river construction, we have a wide variety of construction methods and materials for rivers, from the perspective of "natural river development in harmony with rich nature," in which construction is carried out with consideration for the landscape, preserving the safety of water control, and keeping the natural ecosystem intact. In addition, various fences used in ocean and harbor minimize the impact on the environment by preventing the dispersion of contaminated water from various construction works and spilled oil from accidents and natural disaster.

Greening and weed prevention

Specially designed products promote greening that is appropriate to the nature of the construction site while preventing erosion and sediment outflow of embankment and slope. They will realize early greening in an environmentally friendly manner by using materials such as recycled products made from straws or thinned wood, and corrosive materials decomposed into soil.

Exterior improvement

Various plastics wood products series can meet diverse needs. The "Pla-Giboku (=Plastic wood)" has oak like finish taste but is made of 100% recycled plastic. The "Kankyo-wood II" is made of recycled plastic and recycled wood powder, and has very natural texture and processing properties of natural wood. These are exterior items that help to create a comfortable landscape with a wealth of variations.

Concrete structure repair/reinforcement

Concrete structures, which were constructed during the high economic growth period, are becoming obsolete, and it is indispensable to maintain and extend their service life by taking appropriate treatments. MAEDA KOSEN's extensive lineup of materials for repairing, reinforcing, and protecting includes high-strength fiber materials, resins, and polymer cement mortars offers effective and long-lasting earthquake-resistant reinforcement.

Other materials

Wide variety of materials that dedicate active role in everyday life, such like non-woven fabric, wind/snow protection fence, sand protection fence, and asphalt reforming materials. We support the safety of comfortable daily lives.

MIRAI no Agri

Social infrastructure business
(Agricultural supplies and
animal damage control measures)

Grazing and dairy material
Industry expert also solves
all issues of animal damage

Japan's food self-sufficiency rate is on a long-term downward trend and is susceptible to global food supply and demand, while the future of Japan's agricultural production has many destabilizing factors. MIRAI no Agri intends to contribute to the future of Japanese agriculture by expanding its business in agricultural markets further on, utilizing the technologies and know-how cultivated over many years in agricultural and outdoor field, such as animal damage countermeasure products, electric fences, grazing facilities, and green houses, etc.

Create innovation in agricultural industry and supports agricultural progress

Business description

Animal damage control measure

In recent years, animal damage countermeasures have shifted from the control by wire nets and electric fences (physical and psychological fences) to the trap-based capture. MIRAI no Agri realizes the optimum number of capture by automatic monitoring and remote control using ICT. We have a variety of structural and design traps tailored to the target animals, and are easy to set up. Support efficient capture with our own technology.

Green House

The "Best Couple House" won the 2009 Eco-Products Awards, and the "Triple House" won the 2012 Energy Conservation Grand Prize. By using two-layer film with an air space in-between, we can demonstrate superior heat insulation and contribute to reducing fuel costs and CO2 emissions. In addition to facility horticultural house, we also have a wealth of experience in simple cattle barn and compost shed.

Livestock and Dairy products

First electric pasture instrument in Japan was introduced by Mirai no Agri. Although it was originally developed as a grazing fence for preventing the escape of grazing livestock, subsequently used as a beast fence for controlling animal damage. It also proposes the best method for grazing materials such as cattle steps and cattle gates based on long-standing know-how.

Cattle barn-related material

The facilities such as Stanchion in the barn were the original products the former Kitahara Denboku excelled, but the merger with the former Green System that produced agricultural green house has enabled to design, a simple barn and Stanchion in a set.

MIRAI TECHNO

**Social infrastructure business
(Construction Materials)**

Design from detailed requirements
and integrated production
from development to delivery

Hundreds of different types of sewing machines and welder welding machines are able to accommodate custom-made products and mass production, that can conduct product design and mass production meeting customer needs. In addition, we have a broad range of procurement, and also joint development among group companies, flexible proposals are possible. Production is handled by craftsmen with extensive experience of more than 50 years of processing of membrane materials. From development to delivery, it is able to offer fine-tuned services and achieve short time delivery with high quality carried out in a single company.

Respond to all kinds of sewing request by original technology and know-how, such as thick sewing and super large-sized product sewing.

Business description

Integrated production, planning and production tailored to customer needs.

Leveraging the manufacturing and design know-how inherited from the "Ogawa Tent," which is the pioneer tent manufacturer in Japan, we provide integrated product design, development and delivery that meets customer needs. It is possible to produce a variety of products, including tent warehouses and various seats, rolling stock mats, oil booms, silt booms, simple bathtubs, and water storage tanks. It has a large number of tarpaulin and canvas sewing and welder processing facilities, and by handling everything from development to delivery in a single company, we are able to provide detailed service and achieve short delivery times and high quality.

[Products]

Original bag 「MI Bag」

These bags were produced inheriting the same policy as the equipment by fully utilizing the trust and result of the production of Self Defense Force equipment and the sewing technology of thick fabric.

Water storage tank (self-standing type)

This tank is able to stay self-standing without frame and is also compact storage. It is useful in securing and providing water in times of disaster and it can also be used as bathtub too.

Equipment of the Self-Defense Forces (all sorts)

We conduct sewing and processing of bags and equipment used by Self-Defense Force personnel.

Isolation gown

This medical gown is made of MAEDA KOSEN's PP spunbond non-woven fabric. Manufactured in Japan to ensure safety and security.

Field bathtub

This is an assembled bathtub that plays an active role in times of disaster. Deliveries to the Ground Self-Defense Force are achieved, and they are also used for disaster relief dispatches field site too.

Air-filled oil boom

This is an oil boom with air as a floating body. Compared to conventional polystyrene foam-based oil boom, it can be stored in a compact size.

sunsetclimax Cell 01

This is original tents for outdoor brands. Realized original design and functionality with high technology and quality.

OKINAWA KOSEN

**Social infrastructure business
(Construction Materials)**

Contributing to the development of infrastructure
in Okinawa through integrated
company resources strengths unlike others

OKINAWA KOSEN is engaged in the development and maintenance of infrastructure, mainly in Okinawa. Utilizing a local oriented sales network and MAEDA KOSEN group's diverse product lineup, offering a wide range of services, from proposals at the design stage to the completion of construction at the site. In order to protect the beautiful seas of Okinawa, we contribute to environmental protection through selling and leasing anti-pollution silt protectors.

SEVEN CHEMICAL

Social infrastructure business
(Construction Materials)

Develop and provide highly functional waterproof materials for outer walls, based on accurate understanding about the condition of buildings and the characteristics of paints

Seven Chemical is a pioneer of outer wall waterproofing materials, who developed and manufactured "transparent and paint film waterproofing materials" first in the industry, and leads this field continuously up to now.

Their products make human life safer and more comfortable, and will solve various problems of exterior materials with the accumulated experience and the flexible sales system.

Headquarter Office and Factory

KUSHIRO HIGHMEAL

Social infrastructure business
(Production of fish meal and fish oil)

Utilizes limited fishery resources as feed ingredients, contributes to the dietary lifestyles of stakeholders

Fish are caught in the coastal water of Kushiro and its out putting residue are being processed as fish meal, fish oil, and fish solutions as fertilizers for agricultural products, using head, midribs, bones, etc. as feed stocks for aquaculture fish. Quality is the key, and the traceability of raw materials, production, inspection records are clarified, and factories and equipment are regularly maintained to keep cleanliness. In addition, in order to improve further safety, it is focusing on additive-free products that do not use any feed additives (anti-oxide agents) meeting user requests.

MAEDA KOSEN VIETNAM

Social infrastructure business
(Construction Materials)

Expanding the market to the world by leveraging Japan domestic and overseas technologies and sales networks from Vietnam

As production becomes increasingly globalized, overseas manufacturing bases are playing a progressively important role. Vietnam and ASEAN countries markets are continuously growing, and getting more and more important and highly concerned for Japanese companies, that are also near from Japan. MAEDA KOSEN VIETNAM CO., LTD. was established in Vietnam, as the group first overseas base in 2011 to meet infrastructure demand in Asia, to capture remarkable its growth. Besides continuously expanding production capacity, we are expanding sales channels and also variety of product line in ASEAN countries.

MIRAI KOSEN

Industry infrastructure business

Integrated production from yarn
to finished product processing
with high-performance fiber technology
cultivated in-house

MIRAI KOSEN has built an integrated production system that uses a wide variety of yarns from yarn processing to weaving, knitting, dyeing, cutting, cleaning, and final products. It offers high-quality products under strict quality control. Many years of know-how and experiences are leveraged in the production of high-performance wiping cloths, apparel, medical materials, and high-level processing products. It provides outsourced processing, and offer the best solution proposals for each production process.

Realize the possibility of a fiber starting from a single yarn

Business description

Wiping cloth business

We manufacture and sell high-quality, filament yarn wiping cloth for clean rooms. We offer a high-spec wiping cloth that prevents fluffing and dust from the cutting surface and quickly absorbs water and oil without leaving any wiping mark.

[Products]

Multiple Wipe

100% regular continuous filament polyester yarns are used to reduce costs. It is suited for large mass volume usage, possible to clean precisely/wiping of detailed parts of products.

Meud

Excellent fine clean wipers made of circular knitting composed of ultra-fine fibers. Remove minuscule dust/dirt and suppress reattachment.

TECHNOWIPER Gloves

High-performance knitted wiping cloths made from ultra-fine fibers to prevent dirt from fingers.

Conductive Wiping Cloth

High-performance cloths using ultra-fine fibers give conductive property. Wiping is able by controlling static electricity same time.

Draw-texturing yarn and knitting business

Polyester fibers can be twisted, heat drawn, or combined with multiple fibers to create new functionality, flavor, and appearance. Using the strengths of integrated production system for processed yarns and knit products, it is able to supply materials to a wide range of fields.

[Application]

Medical

Materials for medical are produced under strict quality control through integrated production system.

Sports

Producing functional yarns that can be sweat-absorbing and quick-drying and cut UVs, as well as materials that offer inflation, lightness, and stretch.

Apparel

Materials with the required performance are widely used in fashion apparel, office uniforms, and work wear.

Materials

Because of its superior strength and ease of care compared with natural fibers, it is used in a variety of applications, including curtains, chairs, and car seats.

BBS Japan

Industry infrastructure business
(Automotive wheels)

Quality proven by worldwide
automakers and racing teams

Unique and original manufacturer that continues mass production of wheels only by forging method. Based on the belief creating the world's best wheels, it is refining technology and know-how every day. Many of the wheels manufactured by BBS are supplied to major motorsports end-user companies, also its wheels for general ordinary car vehicle are adopted as genuine proper parts by various automakers brands both in Japan and overseas. By using forging press machine and original production method, it is able to produce ultra-lightweight, ultra-strong forged wheels.

"BBS" is a brand, a pride being world-highest forging technology manufacture.

Business description Thriving on motorsport DNA.

BBS brand has been refined through the deep relationship with motorsport industry. In the research and development stage, not only the driving simulation data analysis is looked into, but also the detailed driver perception about driving feeling will be studied, which could not be obtained from the data analysis only. Racing wheels and aftermarket road wheels are crafted by the same factory and craftsmen, so that general public drivers can also attain and feel a driving sense that is sharpened and developed in the extreme racing competition.

The ultimate design for performance, driving and racing.

BBS's synonym, proprietary cross-spoke design concept runs through all of its lineups, that is a form developed through accumulated examination and study of mechanics. This is the ultimate functional beauty that has been brushed up by the forging technology honored over many years.

Aspiring to the highest level: forging ratio of 4 or more.

BBS commits to forge down to the forging ratio of 4 or more by taking power and time compressing virgin metal. This forging ratio enables the beautiful grain flows to form (metal flow lines) down to the smallest detail.

Continuous challenge using new materials.

Aiming at creating a lightweight wheel, we developed the world's first forged extra super duralumin wheel that features impressive strength compared to conventional aluminum in 2011. By accumulating data through repeated actual driving, we have achieved an ideal balance.

Light, strong and supple. Pursuit of toughness.

Not only light weight and high rigidity are enough to survive in the world of motorsports, but flexible wheel stands against the sudden impact and prevents from breaking. "The power to hold on" toughness is the most important characteristic that BBS forging technology pursue.

Careful finish by craftsman's eyes and hands.

Remaining edges on the surface may lead to corrosion, surface defects are identified and smoothly finished in a number of stages of inspections. Expert craftsmen hold high quality of BBS products.

Each of craftsmen tackles their challenges as a BBS fan.

The fundamentals of manufacturing are to respond sincerely to customer opinions and requests and to reflect them in products. We will look beyond the customer's perspective at BBS and aim for even higher levels with our enthusiasm.

Business Offices

Takaoka Headquarter Office and Factory

Yokkaichi Factory

BBS Motorsport GmbH

Industry infrastructure business
(Automotive wheels)

Headquarter Office

In accordance with our vision of craftsmanship, craft racing wheels with pride of world-highest class forging technology

Succeeded the global brand of BBS Kraftfahrzeugtechnik AG, Germany, which was established in 1970. The forging wheel of BBS, where craftsmanship is effectively used, continues to attract lots of fans with its universal design that transcends the times and fashions. The wheels manufactured by BBS have a number of track records in the motorsports field, and by leveraging the technologies that cultivated from the motorsports field, BBS supplies own brands to numerous automobile manufacturers both in Japan and overseas.

Tokyo Headquarter Office

MAEDA KOSEN CAPITAL

Investment & Consultation business

Contributing to the promotion of innovation together with investee venture companies

Under the mergers and acquisitions strategy, which is positioned as one of the pillar growth strategy, we are positively expanding our business to create new markets by "mixing" diverse technologies and know-how from different business domains. Maximizing the experience and know-how cultivated through past, we promote "diversity" and "open innovation with venture companies," actualizing synergy with existing business domain. We aim to increase the value of invested company.

CORPORATE DATA

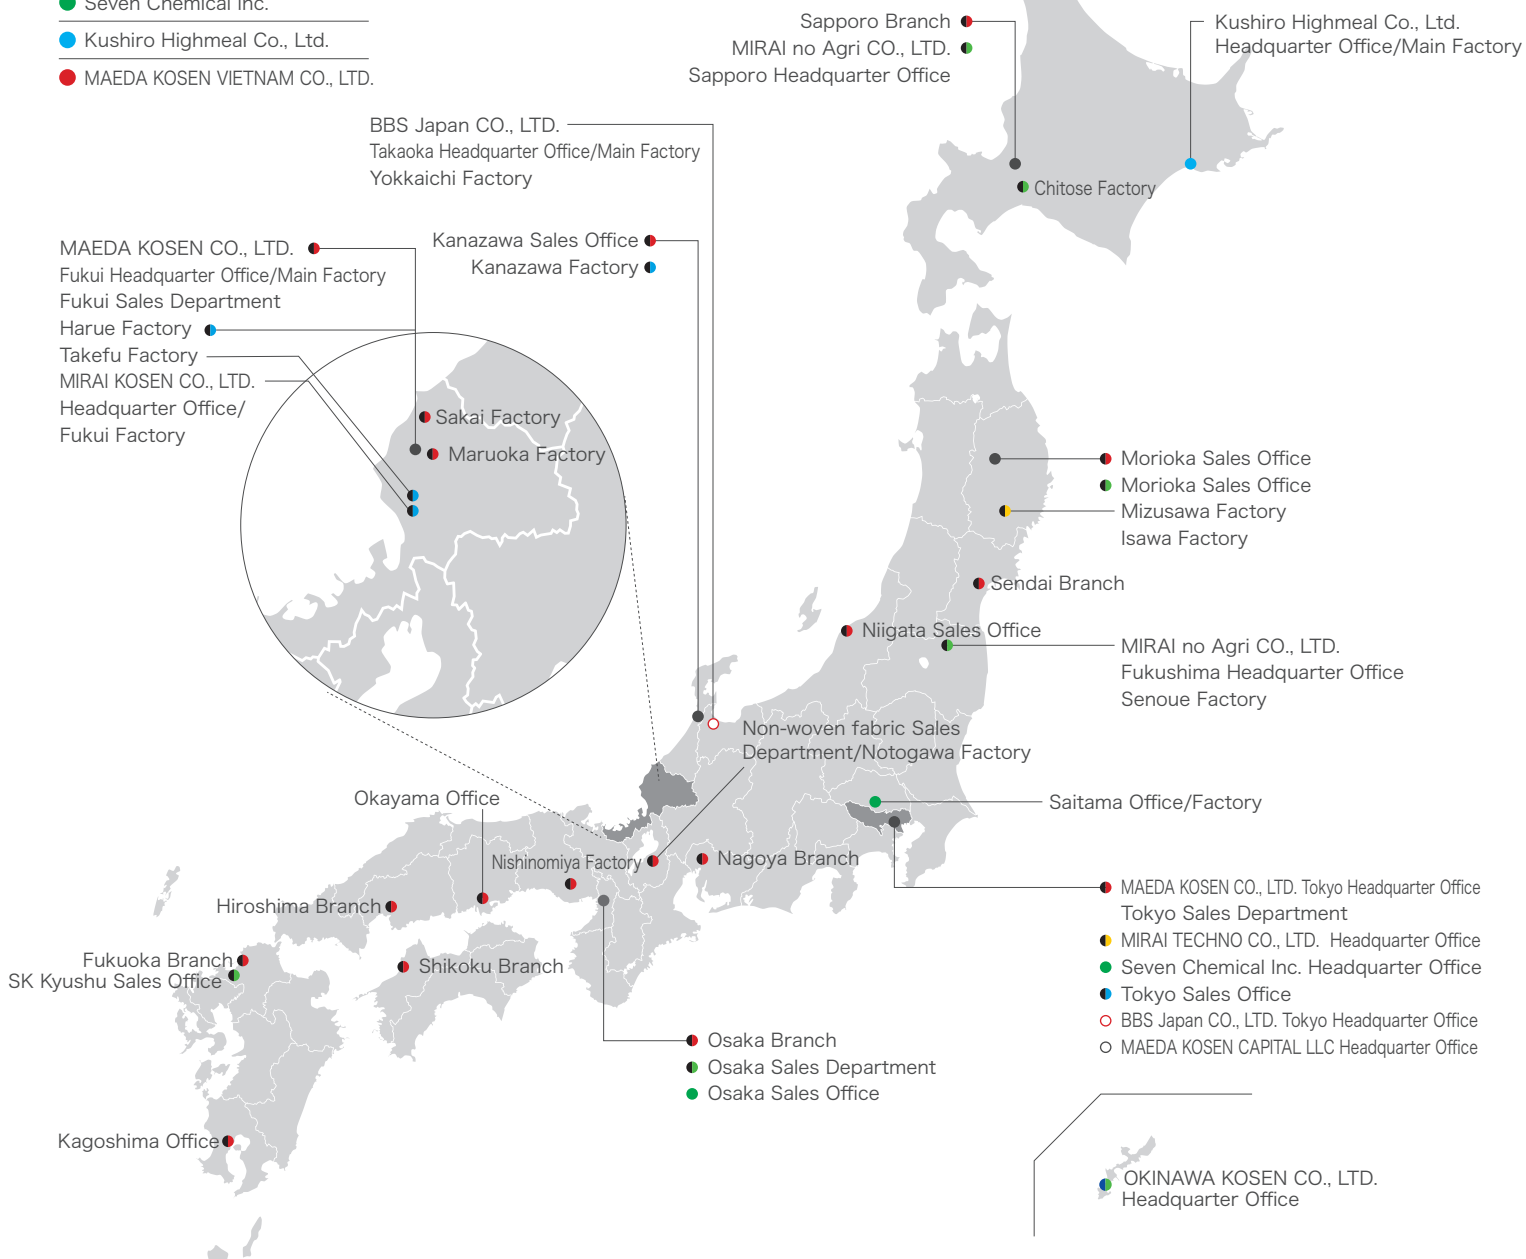

Network of MAEDA KOSEN group

While we are working to improve for further business by promoting deeper specialized study (Vertical axis,) we also keep creating new business bond by integrating different business domain and technology, as we did the synergizing fiber technology and civil engineering in the past (Horizontal axis.)
